GUIDE FOR AUTHORS

Version 1.0 | 2026

Official Journal Abbreviation	SKJEAT
Publisher	Sultan Kudarat State University
Management and Funding	Office of the Vice President for Research, Extension, and Innovation | Research Division
Publication Frequency	Biannual — June and December
Publication Model	Open Access | Peer Reviewed | Double-Blind Peer Review
Article Processing Charge	No submission or publication fee

Prepared as a comprehensive author-policy and manuscript-preparation guide for the journal.

TABLE OF CONTENTS

50. Final Note to Authors

SKJEAT Manuscript Template

1. ABOUT THE JOURNAL

The Sultan Kudarat Journal of Education, Agriculture, and Technology (SKJEAT) is the official biannual, peer-reviewed academic publication of Sultan Kudarat State University (SKSU).

The journal provides a scholarly platform for the dissemination of high-quality research and scholarly work in education, agriculture, food and agricultural systems, technology, and related interdisciplinary fields. SKJEAT seeks to promote research and innovation addressing contemporary challenges in education, agricultural productivity and sustainability, food security, rural development, technological advancement, and inclusive sustainable development.

SKJEAT operates a double-blind peer-review process, in which the identities of authors and reviewers are concealed from one another. Submitted manuscripts are evaluated for originality, methodological rigor, significance, clarity, and scholarly contribution. At least two independent experts in the relevant field are expected to review manuscripts that pass the initial editorial screening.

The journal is published twice a year, in June and December. There are currently no submission or publication charges, and published articles are intended to be openly accessible.

2. AIMS AND OBJECTIVES

The journal particularly welcomes research that demonstrates originality and innovation, sound theoretical grounding, methodological rigor, empirical or scholarly evidence, relevance to education, technology, science, or related fields, practical or policy significance, and potential contribution to sustainable development.

- Encourage interdisciplinary collaboration and knowledge sharing.
- Publish innovative, evidence-based research contributing to education, agriculture, and technology development.
- Provide a venue for theoretical and applied research that informs policy, practice, and pedagogy.
- Showcase the research capabilities of local, national, and international scholars.

3. SCOPE OF THE JOURNAL

SKJEAT welcomes scholarly works addressing issues and developments in education, agriculture, technology and related interdisciplinary areas.

3.1 Education, Learning, and Pedagogy

This area covers research that advances teaching, learning, curriculum, and educational practice across educational levels and learning contexts.

- Curriculum development, contextualization, and innovation
- Teaching and instructional strategies
- Assessment, evaluation, and learning measurement
- Teacher education and professional development
- Learning outcomes and student achievement
- Educational psychology and learner development
- Inclusive, equitable, and accessible education
- Educational leadership and school management

- Educational policy, planning, and reform
- Basic, secondary, and higher education
- Lifelong, continuing, and adult learning
- Community-based and non-formal education
- Alternative learning systems
- Learning environments and classroom practices
- Student engagement, motivation, and well-being
- Quality assurance and educational effectiveness

3.2 Science, Mathematics, and Health Sciences Education

This area focuses on research that strengthens science, mathematics, health sciences learning through innovative, evidence-based, and context-responsive approaches.

- Inquiry-, problem-, and project-based learning
- Laboratory instruction and experiential learning
- Scientific and mathematical reasoning
- Computational thinking and computational approaches
- Technology-enhanced STEM learning
- Environmental and climate change education
- Health, nutrition, and wellness education
- Science communication and public understanding of science
- Assessment of scientific and mathematical competencies
- Development and evaluation of STEM learning resources
- Research on science and mathematics teacher preparation

3.3 Language, Culture, Humanities, and Social Studies

This area promotes scholarship that deepens understanding of language, culture, identity, history, society, and heritage, particularly within the Philippine and Southeast Asian contexts.

- Filipino language, literature, and language education
- English and other language studies
- Multilingual and mother-tongue education
- Philippine history and social studies
- Cultural and heritage education
- Indigenous knowledge systems and practices
- Indigenous peoples' education
- Sociocultural development and community studies
- Local knowledge and place-based learning
- Cultural identity, diversity, and inclusion
- Language policy and planning
- Literature, creative expression, and cultural production
- Digital humanities and cultural preservation
- Peace, citizenship, and values education

3.4 Educational Management, Leadership, and Entrepreneurship

This area addresses the leadership, governance, organizational, and entrepreneurial dimensions of educational institutions and learning organizations.

- Educational administration and management

- Institutional governance and policy implementation
- Strategic planning and organizational development
- Educational leadership and decision-making
- Quality assurance and institutional effectiveness
- Human resource management in education
- Organizational culture and institutional innovation
- Change management and digital transformation
- Entrepreneurship and enterprise education
- Innovation ecosystems and knowledge management
- Resource mobilization and institutional sustainability
- School–industry and university–community partnerships
- Higher education governance and internationalization
- Leadership development and professional learning communities

3.5 Livelihood, Technical-Vocational, and Industrial Technology Education

This area focuses on research that develops employability, technical competence, entrepreneurship, productivity, and sustainable livelihood opportunities.

- Technical-vocational education and training
- Technology and livelihood education
- Industrial technology and applied technical studies
- Skills development and competency-based education
- Workforce preparation and employability
- Career and technical education
- Entrepreneurship and enterprise development
- Sustainable livelihood and community enterprise
- Agricultural, fisheries, and rural technology education
- Appropriate and indigenous technologies
- Innovation in skills training and assessment
- Industry-responsive curriculum and certification
- Productivity, occupational safety, and workplace learning
- Green skills and sustainable production
- Technology transfer and community-based innovation

3.6 Information and Communication Technology and Digital Innovation

This area covers the design, application, evaluation, and governance of digital technologies that improve education, organizations, communities, and society.

- Information and communication technology in education
- Educational technology and learning technologies
- Digital transformation and digital maturity
- Artificial intelligence and generative AI in education
- Learning analytics and educational data science
- Data-driven teaching, learning, and decision-making
- E-learning, online learning, and blended learning
- Digital learning environments and learning management systems
- Educational software, applications, and platforms
- Instructional design and multimedia learning
- Virtual, augmented, and extended reality in education
- Computational thinking, coding, and programming education

- Digital literacy, citizenship, and competence
- Cybersecurity, privacy, and responsible technology use
- Accessibility, assistive technologies, and universal design
- Emerging technologies and technology adoption
- Human–technology interaction and digital well-being

3.7 Applied Science, Technology, and Community Innovation

This area encourages applied and development-oriented research that translates scientific and technological knowledge into solutions for institutional, community, environmental, and societal challenges.

- Applied science and technology
- Research and development of educational and technological products
- Innovation design, prototyping, and evaluation
- Appropriate, sustainable, and inclusive technologies
- Environmental sustainability and climate resilience
- Renewable energy and energy efficiency
- Disaster risk reduction and community resilience
- Smart communities and digital public services
- Agriculture, food systems, and rural development
- Health technologies and community health innovations
- Technology adoption, utilization, and impact assessment
- Knowledge translation and technology transfer
- Community-based participatory research
- Social innovation and inclusive development
- Sustainable Development Goals-related research

3.8 Agriculture, Food Systems, and Rural Development

This area covers research that advances agricultural production, food security, natural-resource stewardship, agricultural innovation, and sustainable rural livelihoods across local, national, and international contexts.

- Crop science, crop improvement, agronomy, and sustainable crop production
- Soil science, soil fertility, land management, and water resources for agriculture
- Horticulture, plant protection, pest and disease management, and postharvest systems
- Animal science, livestock and poultry production, animal health, and breeding
- Fisheries, aquaculture, aquatic resources, and coastal or inland fisheries management
- Agricultural engineering, mechanization, precision agriculture, and smart farming
- Climate-smart agriculture, agroecology, organic agriculture, and regenerative practices
- Agricultural biotechnology, plant and animal genetics, and applied agricultural sciences
- Food science, food technology, food safety, food quality, and food product development
- Food processing, preservation, packaging, storage, and postharvest loss reduction
- Nutrition-sensitive agriculture, food security, food systems, and sustainable diets
- Agricultural economics, agribusiness, value-chain development, and market access
- Agricultural extension, technology adoption, knowledge transfer, and farmer education
- Rural development, community-based enterprises, cooperatives, and sustainable livelihoods
- Indigenous and traditional agricultural knowledge, local crops, and biodiversity conservation

- Agricultural policy, governance, investment, risk management, and rural institutions
- Farm waste valorization, circular bioeconomy, renewable bioresources, and resource efficiency
- Digital agriculture, agricultural information systems, traceability, and data-driven decision-making
- Halal agriculture and food systems, where relevant to production, processing, assurance, and trade
- Resilience of agricultural and food systems to climate change, disasters, and other disruptions

3.9 Interdisciplinary and Transdisciplinary Research

SKJEAT particularly encourages interdisciplinary and transdisciplinary studies that connect education, science, technology, culture, management, and community development.

Priority is given to research that:

- Integrates perspectives, methods, or theories from two or more disciplines;
- Addresses complex educational, technological, social, or environmental problems;
- Develops innovative and context-sensitive solutions;
- Engages schools, universities, industries, government agencies, and communities;
- Promotes equity, sustainability, resilience, and inclusive development; and
- Generates findings with implications for policy, professional practice, institutional improvement, or community transformation.

4. ARTICLE TYPES

4.1 Research Articles

Research Articles report original empirical, theoretical, experimental, qualitative, quantitative, mixed-methods, developmental, or design-based research. A Research Article should normally contain:

- Title
- Abstract
- Keywords
- Introduction
- Review of Related Literature/Theoretical Framework, where appropriate
- Methodology
- Results
- Discussion
- Conclusion
- Recommendations/Implications, where appropriate
- Acknowledgments
- Funding Statement
- Conflict of Interest Statement
- Ethics Statement, where applicable
- References

4.2 Review Articles

Review Articles provide a critical, analytical, and integrative synthesis of existing scholarly literature. They should establish the scope of the review; explain the search or literature-identification strategy where applicable; synthesize rather than merely summarize previous studies; identify trends, inconsistencies, gaps, and emerging issues; and provide implications and directions for future research.

4.3 Policy Briefs

Policy Briefs should translate credible research evidence into concise, actionable information for policymakers, educational leaders, administrators, practitioners, and other stakeholders.

- Executive Summary
- Policy Problem
- Evidence and Context
- Key Findings
- Policy Options
- Recommendations
- Implementation Considerations
- References

4.4 Other Scholarly Contributions

The Editorial Board may consider other scholarly formats.

- Academic Monographs
- Scholarly Books

5. GENERAL PRINCIPLES FOR AUTHORS

- The manuscript falls within the journal's scope.
- The work is original.
- The manuscript has not been published previously.
- The manuscript is not simultaneously submitted to another journal.
- All authors have approved the submitted version.
- All authors have agreed to the authorship order.
- The data and findings are accurately reported.
- Appropriate ethical requirements have been observed.
- All sources are properly acknowledged.
- All citations correspond to references in the reference list.
- All references cited are actually used in the manuscript.
- Potential conflicts of interest are disclosed.
- Funding sources are disclosed.
- Permission has been obtained for copyrighted material where necessary.
- The manuscript follows SKJEAT formatting requirements.

6. ORIGINALITY AND EXCLUSIVITY OF SUBMISSION

Submission to SKJEAT constitutes an assurance by the authors that the manuscript is original, has not been published previously in whole or in substantial part, and is not simultaneously under consideration by another journal or publication.

Authors must disclose previous publication of related findings, conference presentations, preprints, theses or dissertations from which the manuscript was developed, reports or institutional publications containing substantially similar material, and other manuscripts derived from the same dataset.

The existence of a thesis, dissertation, conference presentation, or research report does not automatically prevent publication, but the relationship must be transparently disclosed.

7. AUTHORSHIP AND AUTHOR RESPONSIBILITIES

Authorship should be limited to individuals who have made substantial intellectual or scholarly contributions to the work.

Authors should have contributed meaningfully to one or more of the following:

- Conception or design
- Acquisition, analysis, or interpretation of data
- Development of methodology
- Substantial drafting or critical revision of the manuscript
- Approval and accountability for the final version

Individuals who provided only administrative support, general supervision, funding, proofreading, or technical assistance should not automatically be listed as authors.

Changes in Authorship

After submission, changes to the author list should be avoided. Any request to add or remove an author, change author order, or change the corresponding author must be justified and agreed upon by all authors.

8. CORRESPONDING AUTHOR

The corresponding author serves as the principal contact between the authors and SKJEAT.

The corresponding author is responsible for submitting the manuscript; ensuring that all authors approve the submission; confirming the accuracy of author names and affiliations; communicating with the Editorial Office; coordinating responses to reviewers; submitting revised manuscripts; coordinating proof corrections; and communicating publication decisions to all co-authors.

9. RESEARCH ETHICS AND ETHICAL APPROVAL

Research involving human participants, animals, sensitive personal information, or potentially hazardous procedures must comply with applicable ethical standards and institutional requirements.

The manuscript must include an Ethics Statement where applicable. The statement should identify the reviewing ethics committee or institution, approval or protocol number if applicable, date of approval where required, and relevant ethical standards followed.

Example: Ethics Statement: The study was reviewed and approved by the [Name of Ethics Review Committee], [Institution], under Approval No. [XXXX].

If formal ethics approval was not required, authors should state the reason.

10. INFORMED CONSENT AND PROTECTION OF PARTICIPANTS

- Informed consent
- Voluntary participation
- Confidentiality
- Anonymity or pseudonymization
- Right to withdraw
- Protection from harm
- Secure data storage
- Appropriate handling of sensitive information

Authors must not disclose personally identifiable information unless there is a legitimate scholarly reason and appropriate consent has been obtained. For photographs, videos, interviews, case studies, or other identifiable materials, appropriate permission should be secured.

11. CONFLICT OF INTEREST

All authors must disclose any actual, potential, or perceived conflict of interest. Conflicts may include financial relationships, employment, consultancy, ownership interests, institutional relationships, personal relationships, intellectual property interests, political or organizational interests, or other relationships that could influence the research or its interpretation.

If there is no conflict, authors should state: Conflict of Interest: The authors declare no conflict of interest.

12. FUNDING AND ACKNOWLEDGMENTS

All sources of financial or material support should be disclosed. Funding information should identify the funding agency, grant or project number where applicable, recipient, and role of the funder where relevant.

The Acknowledgments section may recognize individuals or organizations that provided technical assistance, research assistance, language editing, equipment, access to research sites, data, materials, or other substantive support.

Example: Funding: This research was supported by the [Name of Funding Agency] through Project No. [XXXX].

13. RESEARCH INTEGRITY AND ACADEMIC MISCONDUCT

SKJEAT is committed to research integrity and follows ethical principles consistent with the Committee on Publication Ethics (COPE).

Potential misconduct includes:

- Plagiarism
- Self-plagiarism
- Fabrication
- Falsification
- Manipulation of images or data
- Duplicate publication
- Redundant publication
- Inappropriate authorship
- Citation manipulation
- Undisclosed conflicts of interest
- Unethical research
- Peer-review manipulation
- Fraudulent or misleading information

Where concerns arise, the Editorial Board may request supporting documents, raw data, ethics approval, authorship confirmation, or other evidence.

14. USE OF ARTIFICIAL INTELLIGENCE AND GENERATIVE AI

Authors may use generative AI tools for limited purposes such as language improvement, grammar correction, formatting assistance, brainstorming, coding assistance, or organization of ideas.

- AI tools cannot be listed as authors.
- Authors remain fully responsible for the manuscript.
- Authors must verify all AI-generated information.
- AI-generated citations must be independently verified.
- Fabricated references or unsupported claims are unacceptable.
- Confidential or sensitive manuscript/research data should not be uploaded to AI systems where doing so would violate confidentiality or data-protection requirements.
- Substantive use of generative AI in preparing the manuscript should be disclosed.

Proposed disclosure: Use of Artificial Intelligence: Generative artificial intelligence tools were used for language editing and organization of the manuscript. All intellectual content, interpretation, analysis, citations, and final text were reviewed and verified by the authors, who remain fully responsible for the manuscript.

15. MANUSCRIPT PREPARATION REQUIREMENTS

- File format: Microsoft Word .docx
- Font: Times New Roman
- Font size: 12 pt
- Line spacing: 1.5
- Margins: 1 inch on all sides
- Alignment: left aligned or justified, subject to the journal template
- Page numbers: continuous
- Tables: editable, not images

- Figures: high-resolution files
- Main manuscript: anonymized for double-blind review

16. STRUCTURE OF RESEARCH ARTICLES

- Title
- Abstract
- Keywords
- 1. Introduction
- 2. Review of Related Literature/Theoretical Framework, where appropriate
- 3. Methodology
- 4. Results
- 5. Discussion
- 6. Conclusion
- 7. Recommendations/Implications, where appropriate
- Acknowledgments
- Funding Statement
- Conflict of Interest Statement
- Ethics Statement, where applicable
- References

17. STRUCTURE OF REVIEW ARTICLES

- Title
- Abstract
- Keywords
- Introduction
- Review Methodology
- Results/Synthesis
- Discussion
- Research Gaps
- Implications
- Conclusions
- Recommendations/Future Research
- References

A review article should demonstrate critical synthesis, not simply a list of summaries.

18. STRUCTURE OF POLICY BRIEFS AND FIELD REPORTS

Policy Brief

Recommended length: 3,000–5,000 words.

- Title
- Executive Summary
- Policy Issue
- Background
- Evidence

- Key Findings
- Policy Options
- Recommended Action
- Implementation Considerations
- References

19. TITLE

The title should be concise and informative; accurately represent the research; identify the main variables, population, context, or phenomenon where appropriate; avoid unnecessary abbreviations; avoid overly broad claims; avoid promotional language; and avoid unnecessary phrases such as 'A Study of' or 'An Investigation of'.

Preferred: Artificial intelligence literacy and academic engagement among preservice teachers

Avoid: A Study on the Investigation of the Relationship Between Artificial Intelligence Literacy and Academic Engagement of Preservice Teachers

20. AUTHOR NAMES AND AFFILIATIONS

Authors should provide their full names consistently across the manuscript, title page, submission system, and subsequent publication metadata.

Recommended format: Maria L. Santos[1], Juan D. Reyes[2], and Ana P. Cruz[1]*

Affiliations: [1] College of Teacher Education, Sultan Kudarat State University, Sultan Kudarat, Philippines; [2] College of Information and Communications Technology, Sultan Kudarat State University, Sultan Kudarat, Philippines.

The corresponding author should be identified using an asterisk.

21. ABSTRACT

Recommended maximum: 250 words for Research Articles.

The abstract should be informative and should normally contain Background/Context, Objective, Methods, Results, and Conclusion/Implications.

- Do not cite references in the abstract.
- Do not include unexplained abbreviations.
- Do not make claims unsupported by the manuscript.
- Do not introduce information absent from the paper.

22. KEYWORDS

Provide 3–5 keywords. Keywords should be specific, reflect the major concepts of the article, avoid terms already represented adequately by the title, use accepted terminology where possible, and follow the journal's approved capitalization/order style.

23. INTRODUCTION

- Establish the research context.
- Present the problem.
- Summarize existing knowledge.

- Identify the research gap.
- Explain the significance of addressing the gap.
- State the research objective(s), question(s), and/or hypothesis(es), as appropriate.

The Introduction should not become an excessively long literature review. The final paragraph should clearly state what the study seeks to accomplish.

24. METHODOLOGY

The methodology should provide sufficient information for readers and reviewers to understand how the study was conducted and, where appropriate, replicate it.

- Research approach
- Research design
- Setting
- Population
- Participants
- Sampling procedure
- Sample size
- Inclusion/exclusion criteria
- Instruments
- Validity and reliability
- Data collection procedures
- Intervention or experimental procedures
- Variables
- Statistical methods
- Qualitative analysis procedures
- Software used
- Ethical procedures
- Limitations affecting the methodology

25. RESULTS

- Organize results according to research questions or objectives.
- Present appropriate descriptive statistics.
- Report inferential statistics where applicable.
- Report effect sizes and confidence intervals when appropriate.
- Avoid duplicating identical information in text, tables, and figures.
- Distinguish statistical significance from practical significance.
- Avoid interpreting results extensively in this section where a separate Discussion is used.

26. DISCUSSION

- Interpret major findings.
- Compare results with previous research.
- Explain agreements and contradictions.
- Discuss theoretical implications.

- Discuss practical implications.
- Identify limitations.
- Avoid unsupported speculation.
- Explain the contribution of the study.

The Discussion should not simply repeat the Results section.

27. CONCLUSION AND RECOMMENDATIONS

The Conclusion should directly answer the research objectives or questions, summarize the principal contribution, avoid introducing new findings, and avoid exaggerated claims.

Recommendations should be directly supported by the research findings.

28. REFERENCES

SKJEAT manuscripts should use the American Psychological Association (APA) 7th edition for in-text citations and the reference list. Authors are encouraged to use a reference manager such as Zotero, Mendeley, or EndNote to insert citations and generate the bibliography. The selected output style must be "APA 7th edition".

In-text citation examples:

Parenthetical citation: (Santos, 2023)

Narrative citation: Santos (2023)

Two authors: (Garcia & Cruz, 2022)

Three or more authors: (Dela Cruz et al., 2021)

Multiple sources: (Garcia, 2022; Santos, 2023)

Direct quotation: (Santos, 2023, p. 15)

Reference-list requirements:

- Include only sources cited in the manuscript.
- Ensure every in-text citation has a matching reference-list entry.
- Arrange entries alphabetically by the surname of the first author.
- Use a hanging indent of 0.5 inch and double spacing in the final reference list.
- Use sentence case for article, book, and webpage titles; italicize journal titles and volume numbers.
- Include a DOI in URL format (https://doi.org/...) when available.
- Do not include database names or retrieval dates for ordinary journal articles unless specifically required by APA 7.
- Check author names, publication years, titles, volume/issue, page range or article number, and DOI/URL for accuracy.

Reference Examples

Journal article:

Grady, J. S., Her, M., Moreno, G., Perez, C., & Yelinek, J. (2019). Emotions in storybooks: A comparison of storybooks that represent ethnic and racial groups in the United States. Psychology of Popular Media Culture, 8(3), 207–217. https://doi.org/10.1037/ppm0000185

Book: American Psychological Association. (2020). Publication manual of the American Psychological Association (7th ed.). American Psychological Association.

Webpage: World Health Organization. (2018, May 24). The top 10 causes of death. https://www.who.int/news-room/fact-sheets/detail/the-top-10-causes-of-death

29. TABLES

- Number tables consecutively.
- Cite every table in the text.
- Provide informative titles.
- Use editable tables.
- Do not submit tables as images.
- Avoid unnecessary duplication of textual results.
- Define abbreviations.
- Include appropriate notes explaining statistical symbols.

Example:

Table 1. Academic engagement scores of respondents according to year level

Year Level	n	Mean	SD
First Year	50	3.82	0.45
Second Year	48	3.91	0.42

Note. SD = standard deviation.

30. FIGURES AND ILLUSTRATIONS

- Graphs
- Charts
- Photographs
- Conceptual frameworks
- Maps
- Diagrams
- Screenshots
- Technical drawings
- Other visual material

Figures should be numbered consecutively, cited in the text, provided with informative captions, remain readable after publication, use consistent fonts and symbols, avoid unnecessary decorative elements, and clearly identify axes, units, legends, and symbols.

Recommended formats: JPEG, PNG, TIFF, EPS, and editable Microsoft Office graphics where appropriate.

Recommended publication-quality resolution: at least 300 dpi for photographs/halftones, 1,000 dpi for line drawings, and 500 dpi for combined line/halftone images.

Recommended caption style:

Figure 1. Title of the figure: brief description of the content and symbols used.

31. EQUATIONS AND MATHEMATICAL EXPRESSIONS

- Create equations using an editable equation editor.
- Number equations consecutively when necessary.
- Cite equations in the text.
- Use consistent symbols.
- Define variables.
- Do not submit screenshots of equations.

32. UNITS, NUMBERS, ABBREVIATIONS, AND STATISTICAL REPORTING

32.1 Abbreviations

Spell out a term at first occurrence followed by the abbreviation. Example: artificial intelligence (AI). Thereafter, use AI. Do not introduce abbreviations that will be used only once.

32.2 Numbers

Use numerals for measurements, statistical values, percentages, units, dates, and mathematical expressions. Numbers at the beginning of sentences should generally be spelled out.

32.3 Statistical Reporting

Authors should report the statistical test used, assumptions where relevant, sample size, test statistic, degrees of freedom where applicable, p-value, effect size where appropriate, and confidence interval where appropriate.

Example: The intervention group demonstrated significantly higher post-test scores than the control group, $t(58) = 2.74$, $p = .008$, Cohen's $d = 0.71$.

33. LANGUAGE AND WRITING STYLE

- Write in clear, concise, scholarly English unless the Editorial Board authorizes another language.
- Avoid unnecessary jargon.
- Define specialized terms.
- Use inclusive and respectful language.
- Avoid exaggerated claims.
- Maintain consistent terminology.
- Use active or passive voice appropriately.
- Maintain logical transitions.
- Proofread carefully before submission.

Authors are responsible for the accuracy and clarity of their manuscripts.

34. SUBMISSION REQUIREMENTS

- File 1 — Cover Letter

- File 2 — Title Page
- File 3 — Anonymous Manuscript
- File 4 — Supplementary Materials, if applicable

A complete submission should contain all required files. Tables and figures should be incorporated in the manuscript in editable form unless the submission system requires separate figure files.

35. COVER LETTER

- Manuscript title
- Article type
- Statement that the manuscript is original
- Confirmation that it is not simultaneously submitted elsewhere
- Brief explanation of the research problem
- Key contribution/novelty
- Relevance to SKJEAT
- Ethics approval, if applicable
- Conflict of interest disclosure
- Funding information
- Confirmation that all authors approved the submission
- Corresponding author's contact information

Suggested declaration: We hereby confirm that the manuscript is original, has not been published previously, and is not currently under consideration for publication elsewhere. All authors have reviewed and approved the manuscript and agree with its submission to the Sultan Kudarat Journal of Education, Agriculture, and Technology.

36. TITLE PAGE

- Article type
- Full article title
- Complete author names
- Author affiliations
- ORCID iDs, if available
- Corresponding author
- Email address
- Keywords
- Funding information
- Conflict of interest declaration
- Ethics information, where appropriate

The Title Page must be submitted separately from the anonymous manuscript.

37. ANONYMOUS MANUSCRIPT

- Remove author names.
- Remove institutional affiliations.
- Remove acknowledgments that reveal identity.
- Remove identifying funding information where necessary.

- Remove self-identifying statements such as 'our university'.
- Check document properties for author information.

Instead of: Researchers from Sultan Kudarat State University conducted... use: The researchers conducted...

38. SUPPLEMENTARY MATERIALS

- Additional tables
- Additional figures
- Research instruments
- Datasets
- Code
- Protocols
- Appendices
- Methodological materials
- Technical documentation

Supplementary materials must be relevant to the manuscript and should not contain unnecessary information.

39. INITIAL EDITORIAL SCREENING

- Scope and relevance
- Originality
- Basic methodological quality
- Completeness of submission
- Compliance with formatting requirements
- Ethical compliance
- Academic writing quality
- Potential plagiarism or duplicate publication
- Adequacy of scholarly contribution
- Suitability for peer review

A manuscript may be returned to the author for technical correction or rejected without external peer review when it clearly fails to meet basic requirements.

40. DOUBLE-BLIND PEER REVIEW

- The manuscript is assigned to an appropriate Section Editor.
- At least two independent reviewers are invited.
- Reviewers evaluate the manuscript without access to author identities.
- Authors do not receive reviewer identities.
- Reviewers provide comments and recommendations.
- The Editor evaluates reviewer reports.
- A decision is communicated to the corresponding author.

41. EDITORIAL DECISIONS

Accept

The manuscript is accepted with no substantive revisions or only minor production corrections.

Minor Revision

The manuscript requires limited revisions before acceptance.

Major Revision

Substantial revisions are required. The revised manuscript may undergo another round of peer review.

Reject and Resubmit

The manuscript requires extensive changes before it could reasonably be considered as a new submission.

Reject

The manuscript is not suitable for publication in SKJEAT.

42. REVISION AND RESUBMISSION

- Carefully review all reviewer comments.
- Prepare a revised manuscript.
- Prepare a separate Response to Reviewers document.
- Respond to every substantive comment.
- Explain respectfully when a recommendation cannot be followed.
- Identify where changes were made.
- Ensure consistency between the response and revised manuscript.

Recommended Response to Reviewers format:

Reviewer Comment	Author Response	Action Taken/Location
Comment 1	Thank you for the observation. We revised...	Page 8, Paragraph 2
Comment 2	We respectfully disagree because...	No change; explanation provided

Recommended revision deadlines: Minor Revision — 14 days; Major Revision — 30 days. Extensions may be granted by the Editor-in-Chief upon reasonable request.

43. COPYEDITING AND PROOFREADING

- Language editing
- Copyediting
- Formatting
- Reference checking
- Metadata preparation
- DOI assignment

- Figure and table checking
- Proofreading
- Final layout

Acceptance does not necessarily mean that the submitted formatting will appear unchanged in the final publication.

44. PUBLICATION AND ARTICLE METADATA

- Article title
- Author names
- Affiliations
- Abstract
- Keywords
- Publication date
- Volume
- Issue
- Page or article number
- DOI, when available
- ORCID iDs, when available
- Citation information

45. CORRECTIONS, RETRACTIONS, AND POST-PUBLICATION ISSUES

Correction

A correction may be issued for a substantive error that does not invalidate the article.

Retraction

Retraction may be considered when there is evidence of fabricated data, falsified data, plagiarism, serious methodological error, unethical research, duplicate publication, major undisclosed conflict of interest, or other circumstances that materially compromise the reliability of the publication.

Expression of Concern

Where an allegation is serious but investigation is incomplete, the journal may issue an editorial notice to alert readers.

46. COPYRIGHT AND LICENSING

SKJEAT shall adopt an open-access publishing policy that protects the intellectual property rights of authors while promoting the unrestricted dissemination of scholarly knowledge. Authors shall retain copyright ownership of their published works while granting Sultan Kudarat State University (SKSU), through SKJEAT, the non-exclusive right of first publication, reproduction, distribution, public communication, and long-term archiving of their articles in print, electronic, and other appropriate formats. The Journal shall adopt a Creative Commons licensing framework, preferably the Creative Commons Attribution 4.0 International (CC BY 4.0) license, subject to the approval of the authorized university authority. This license shall allow users to share, reproduce, distribute, and adapt published works, including for commercial purposes, provided that proper attribution is given to the original authors, the original publication in SKJEAT is acknowledged, and any modifications are appropriately indicated. Authors shall be responsible for ensuring the originality of their submissions, securing necessary permissions for third-party copyrighted materials, and complying with applicable copyright and licensing requirements. The Journal shall ensure that copyright ownership, publication rights, licensing conditions, and permitted uses of published articles are clearly specified in the Author Guidelines, manuscript submission system, publishing agreement, article PDF, and official journal website. SKJEAT shall also maintain appropriate digital archiving and preservation mechanisms to ensure continued access to published scholarly works. The Editorial Board shall periodically review and recommend amendments to these Guidelines in accordance with applicable intellectual property laws, open-access publishing standards, research ethics, and institutional policies, subject to approval by the authorized university authority.

47. DATA AVAILABILITY AND RESEARCH MATERIALS

Example: Data Availability Statement: The datasets generated and/or analyzed during the current study are available from the corresponding author upon reasonable request.

Where data cannot be shared because of confidentiality, privacy, intellectual property, or ethical restrictions, authors should explain the limitation.

48. AUTHOR CHECKLIST

- The manuscript falls within the scope of SKJEAT.
- The article type is appropriate.
- The manuscript is original.
- It has not been published elsewhere.
- It is not under consideration elsewhere.
- Related publications have been disclosed.
- All authors meet authorship requirements.
- All authors approved the manuscript.
- Author order has been approved by all authors.
- Corresponding author has been identified.
- Ethical approval was obtained where required.
- Ethics information is included.
- Informed consent was obtained where required.
- Participant confidentiality is protected.

- Title is concise and informative.
- Abstract meets the approved word limit.
- Keywords are included.
- Research objectives are clearly stated.
- Methodology is sufficiently described.
- Results are clearly presented.
- Discussion interprets the findings.
- Conclusion addresses the objectives.
- All tables are editable and cited.
- All figures are cited and publication quality.
- Captions are complete.
- Every in-text citation appears in the reference list.
- Every reference in the list is cited in the text.
- DOI information is included where available.
- Funding is disclosed.
- Conflict of interest is disclosed.
- Ethics statement is included where applicable.
- AI use is disclosed where applicable.
- Data availability statement is included where required.
- Author names have been removed from the anonymous manuscript.
- Separate Cover Letter and Title Page are prepared.
- Supplementary Materials are included, if applicable.

Reynaldo H. Dalayap Jr., PhD
Vice President for Finance, Administration, and Resource Generation

Allan A. Maglantay, PhD
Vice President for Academic Affairs

50. FINAL NOTE TO AUTHORS

Authors are strongly encouraged to read the Guide for Authors carefully before submitting a manuscript.

A manuscript that is scientifically sound but does not comply with basic submission, ethical, formatting, or documentation requirements may be returned to the authors before peer review.

The editorial team aims to make the review and publication process constructive, transparent, fair, and rigorous. The purpose of peer review is not only to determine whether a manuscript is suitable for publication but also, where possible, to improve the quality, clarity, and scholarly contribution of the work.

SKJEAT is committed to evaluating manuscripts based on scholarly merit rather than institutional affiliation, nationality, or background, consistent with its commitment to academic freedom, equity, and diversity.
